

Forklift Fork Positioner

Forklift Fork Positioner - A fork positioner is actually an apparatus constructed out of top quality materials intended to be able to endure the most challenging operations and work environments. This piece of equipment could enable the individual driving to be able to maneuver the forks hydraulically without leaving the seat. Side shifting units have the added ability to laterally position the arms or the entire load in order to facilitate much more exact carrying and placement in a quicker and more effective manner.

The unique blade pocket design enables operators to securely sway the unit's blades without any worry of damaging the positioning cylinders. This can allow the worker the option to either perform simultaneous or independent fork movement, depending on the job requirement. For most forklifts with non-OEM carriages, complete carriages are necessary. Standard OEM carriages can be converted into fork positioners on available units.
